

ROADMAP FOR BABIES OF MOTHERS INFECTED WITH ZIKA DURING PREGNANCY WHO APPEAR HEALTHY

This document should be used as a guide to discuss the screening and testing your baby may receive with his or her primary care provider. Each baby is different, and it is possible that your baby may need more tests or fewer tests.

Follow the roadmap to check off each **recommended** doctor's visit for the first year of follow up.

BIRTH

▶ The tests and screenings your baby will likely receive before leaving the hospital include:

- Comprehensive physical exam
- Standard newborn hearing assessment
- Zika virus laboratory testing (blood and urine)

If your baby does not pass any of these screenings, you may be referred for additional follow-up.

- ▶ **Routine well-baby visits** include an exam of how your baby is growing and developing, routine immunizations, guidance about what you might expect, and support for mental and social well-being.
- ▶ **Talk to your baby's primary care provider about establishing a medical home for your baby.** A medical home is not a place. It is an approach to healthcare that makes sure your baby gets the best, most appropriate services.
- ▶ **If your baby tests positive for Zika virus infection,** he or she may receive more screenings and tests. For more information, visit our [roadmap for babies with congenital Zika infection](#).
