

Active Bacterial Core Surveillance (ABCs) Report

Emerging Infections Program Network

Group B *Streptococcus*, 2014

ABCs Areas

California (3 county San Francisco Bay area); Colorado (5 county Denver area); Connecticut (children < 1 year); Georgia (20 county); Maryland; Minnesota; New Mexico; New York (15 county Rochester and Albany areas); Oregon (3 county Portland area); Tennessee (20 counties)

ABCs Population

The surveillance areas represent 33,074,617 persons and 434,908 live births. Source: National Center for Health Statistics bridged-race vintage 2014 postcensal file and 2012 state vital records

ABCs Case Definition

Invasive group B streptococcal disease: isolation of Group B *Streptococcus* from a normally sterile site in a resident of a surveillance area in 2014. Early-onset cases occur at < 7 days of age and late-onset occur between 7 and 89 days of age.

ABCs Methodology

ABCs personnel routinely contacted all microbiology laboratories serving acute care hospitals in their area to identify cases. Standardized case report forms that include information on demographic characteristics, clinical syndrome, and outcome of illness were completed for each identified case. Regular laboratory audits assessed completeness of active surveillance and detected additional cases.

Rates of early-onset and late-onset group B streptococcal disease were calculated using **live birth estimates for 2012**. All other rates were calculated using population estimates for 2014 from the bridged-race vintage 2014 postcensal file. For national estimates of cases, race- and age-specific rates of disease were applied from the aggregate surveillance area to the age and racial distribution of the 2014 U.S. population and to the **2012 live birth estimates** for early-onset and late-onset disease. Cases with missing data, excluding ethnicity, were multiply imputed using sequential regression imputation methods[†]

Healthy People 2020 Update

Early-Onset Disease

Objective: Decrease the incidence of invasive early-onset group B streptococcal disease to 0.25 cases per 1,000 live births.
